

100 Automation Examples for Linux System Administrator and DevOps

In today's fast-paced IT environment, automation is essential for system administrators and DevOps engineers. Automation can help you to:

- Save time and effort by automating repetitive tasks
- Improve accuracy and consistency by eliminating human error
- Increase efficiency by automating complex processes
- Gain visibility into your infrastructure by tracking the status of automated tasks

This book provides a comprehensive collection of ready-to-use automation examples for Linux system administrators and DevOps engineers. It covers a wide range of tasks, from basic system tasks to complex application deployments. The examples are easy to understand and follow, and they can be easily customized to fit your specific needs.

This book is divided into 10 chapters, each of which covers a different aspect of Linux automation. The chapters are:

Ansible For Linux by Examples: 100+ Automation Examples For Linux System Administrator and DevOps
