For over a century, the theory of evolution has been taught as scientific fact in schools and universities around the world. But what if the theory of evolution is not true? What if the evidence actually supports a different view of the origin of life?

In his groundbreaking book, *Glass House: Shattering the Myth of Evolution*, Dr. Jonathan Wells presents a compelling case against evolution. Wells, a molecular biologist and former senior fellow at the Discovery Institute, meticulously examines the scientific evidence and finds it wanting. He shows that the theory of evolution is based on a number of assumptions that are not supported by the evidence.

For example, the theory of evolution assumes that the genetic mutations that occur over time are random. However, Wells shows that many mutations are not random at all. In fact, some mutations are actually

beneficial to the organism. This suggests that the mutations that drive evolution are not random, but rather are directed by some kind of intelligent force.

Wells also shows that the theory of evolution cannot explain the complexity of life. The theory of evolution proposes that life arose from simple, self-replicating molecules. However, the simplest self-replicating molecules that we know of are extremely complex. This complexity cannot be explained by the theory of evolution.

Finally, Wells shows that the theory of evolution is not supported by the fossil record. The fossil record shows that life has changed over time. However, the changes that we see in the fossil record are not consistent with the predictions of the theory of evolution. In fact, the fossil record shows that some organisms have remained unchanged for millions of years.

In light of the evidence presented by Wells, it is clear that the theory of evolution is not supported by the scientific evidence. The theory of evolution is a myth, and it is time to shatter that myth.

## **About the Author**

Dr. Jonathan Wells is a molecular biologist and former senior fellow at the Discovery Institute. He is the author of several books, including *Icons of Evolution: Science or Myth?* and *The Politically Incorrect Guide to Evolution*. Wells has been featured in numerous documentaries and has spoken at universities and conferences around the world.

## **Reviews**

"Glass House is a must-read for anyone who is interested in the debate over evolution. Wells presents a compelling case against evolution, and his book is sure to challenge your thinking." - Michael Behe, author of Darwin's Black Box

"Glass House is a devastating critique of the theory of evolution. Wells has done a masterful job of exposing the scientific flaws in the theory of evolution." - Phillip Johnson, author of Darwin on Trial
