

Maybe They Left Tools In My Brain: A Neurosurgeon's Odyssey of Recovery and Reinvention

A Story of Hope and Resilience

In 2007, Dr. James Doty, a renowned neurosurgeon, suffered a life-altering brain injury. After a 40-foot fall, he was left with a traumatic brain injury (TBI) that shattered his skull, tore a hole in his brain, and left him in a coma for six weeks. The doctors gave him little chance of survival, and if he did survive, they said he would likely be severely disabled.
