Natural science has played an increasingly important role in archaeology in recent decades. This is due to a number of factors, including the development of new technologies that have made it possible to collect and analyze data in new ways, and the growing recognition of the importance of environmental factors in understanding human behavior.

This book provides a comprehensive overview of the state of the art in natural science applications in archaeology. It includes chapters on a wide range of topics, including:

*

- Geophysics

*

- Geochemistry

*

- palynology

*

- zooarchaeology

*

- and archaeobotany

Each chapter is written by a leading expert in the field, and provides a detailed overview of the methods and techniques used in that particular discipline. The book also includes a number of case studies from around the world, which illustrate how natural science methods have been used to solve archaeological problems.

This book is an essential resource for archaeologists who want to use natural science methods in their research. It provides a comprehensive overview of the state of the art in the field, and includes a number of case studies that illustrate how natural science methods have been used to solve archaeological problems.

Table of Contents

*

- Chapter 1: Geophysics

*

- Chapter 2: Geochemistry

*

- Chapter 3: Palynology

*

- Chapter 4: Zooarchaeology

*

- Chapter 5: Archaeobotany

Case Studies

*

- Case Study 1: The use of geophysics to locate buried archaeological features at a site in the United Kingdom

*

- Case Study 2: The use of geochemistry to analyze the chemical composition of pottery from a site in the Near East

*

- Case Study 3: The use of palynology to reconstruct the environmental history of a site in North America

*

- Case Study 4: The use of zooarchaeology to study the diet of a prehistoric population in Europe

*

- Case Study 5: The use of archaeobotany to study the agricultural practices of a prehistoric population in South America

Natural science methods have become an essential part of archaeological research. This book provides a comprehensive overview of the state of the art in the field, and includes a number of case studies that illustrate how natural science methods have been used to solve archaeological problems. This book is an essential resource for archaeologists who want to use natural science methods in their research.
