The cardiovascular system is responsible for transporting blood throughout the body, delivering oxygen and nutrients to cells and removing waste products. It is made up of the heart, blood vessels, and blood. The heart is a muscular organ that pumps blood through the blood vessels. The blood vessels are a network of tubes that carry blood throughout the body. Blood is a liquid tissue that contains red blood cells, white blood cells, and platelets.

The cardiovascular system is a complex and vital system that plays a role in many important bodily functions, including:

- Delivering oxygen and nutrients to cells
- Removing waste products from cells
- Regulating body temperature
- Fighting infection
- Maintaining blood pressure

The cardiovascular system can be affected by a number of diseases and conditions, including:

- Heart disease
- Stroke
- High blood pressure
- Diabetes
- Obesity

The Cardiovascular System at a Glance provides a comprehensive overview of the cardiovascular system, including its anatomy, physiology, and common diseases and conditions. It is an essential resource for students and practitioners who want to learn more about this vital system.

Table of Contents
